

User Empathy

- How I use timer
 - Tried, personally can't bc I work/stop by task rather than time, so stopping by time was bad for me bc i often would stop in the middle of a task which i dislike
 - It'd be nice if i had, 1 task -> break -> 1 task -> break etc
 - I will define my tasks
- Non student
 - May be away from the device for timer, so need an alarm when it's over?

<https://pomofocus.io/>

- Love how background color changes for work/break
- Has stats/reports like how we wanted
- Tasks
- Settings for diff times
- Profiles for diff ppl -> rankings

<http://www.tomatotimers.com/>

- Very cute UI, love the tomato
 - Diff tomato for work/break
- Simple explanation
- Todo list
- No reports/profiles

<https://www.online-timers.com/pomodoro-timers>

- Not intuitive
- Not focused, many other features like stop watch/regular timer
- Like: set own sequence
 - Some ppl may start out more productive, so like 30 min-> 25 min -> 20 min may be better than a set time that u have to pick

Designs I like
